To whom it may concern,

I truly benefit from using XM Satellite Radio every day. I am paying for a service that I feel provides me quality music, news, sports, traffic and weather. I no longer get this type of radio from my local radio stations and I believe XM is the future. I have turned off my local radio in favor of XM since I believe local radio has lost its way since mega companies dictate what can be played (playlists) etc.

Since I pay for this service, I do not believe the NAB has any say in what I listen to just as the television broadcast industry cannot dictate what channels I watch on my satellite television. Due to this, I would urge the FCC to reject the NAB petition 04-160.
